***Allowance of Application # 09/732,322***

1. The following communication is in response to applicant's amendments to the Specification, received 8-March-2005. The objections to the Specification raised in the previous office action are removed by the examiner.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application, which was allowed in the previous office action pending some objections to the specification, is directed to a non-obvious improvement over the information described in the article authored by Jensen, entitled *Optimization Method for Permanent-Magnet Structures*, the improvement comprising a method for designing an electromagnetic coil arrangement that generates a uniform magnetic field in a desired region, wherein the number of coils and the shape are defined by the radial and axial coordinates of a cylindrical coordinate system respectively.. This patentable distinction is included in each of the independent claims, nos. 1, 4 and 7. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <design of an electromagnetic coil arrangement that generates a uniform magnetic field in a desired region> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 5, line 3 through page 38, and Figures 1-7b. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
